PROFESSIONAL PROFILE

Ms. Xiaohui Jiang has more than 15 years of experience as a statistician, biostatistician, and research analyst in both the academic and private sectors. As a Senior Biostatistician in a consulting environment, she most recently has performed data management; cleaning and harmonization of large, disparate databases; analysis of clinical data; and real-world data analyses using data on insurance claims, hospital discharges, disease registries, and clinical chart data. Her statistical expertise extends to a broad range of research projects, including risk assessments, occupational studies, and environmental evaluations.

Ms. Jiang has performed meta-analyses of occupational risks and applied statistical approaches that include linear regression, logistical regression, and quantile regression, and has collected experimental data, created data sets, and analyzed and interpreted data for academic and industrial organizations. She is proficient in the statistical programs SAS, SQL, R, and STATA, and she is a co-author on 24 studies published in the peer-reviewed literature.

EDUCATION AND DEGREES EARNED

- 2004 Master of Science in Applied Statistics
Bowling Green State University, Bowling Green, Ohio
- 1995 Bachelor of Science in Chemistry
Nanjing University, Nanjing, China

SELECTED PROFESSIONAL EXPERIENCE

Performed complex statistical analysis of disease risk using the National Health and Nutrition Examination Survey 2007-2010, using SAS to build a risk model for diabetes and arthritis. Applied results to build a disease-specific calculator.

Provided statistical and analytical expertise for the large data sets collected by complex survey designs in the University of Michigan Dioxin Exposure Study. Identified the factors that explained the variation in serum dioxin concentrations among the residents in Midland and Saginaw Counties using SAS.

Evaluated whether childhood cancer and childhood leukemia incidence rates are associated with hydraulic fracturing using state cancer data and census data.

Analyzed Optum data to investigate disease burden, Thrombotic event risk, anxiety and depression risk, seasonality pattern, and healthcare resource utilization of cold agglutinin disease patients.

Analyzed national HCUP data to evaluate the trends in respiratory syncytial virus and unspecified bronchiolitis hospitalization rates among US high-risk infants.
