## PROFESSIONAL PROFILE

---

Dr. William (Bill) Rish has more than 40 years of experience consulting on matters of environmental exposure and risk assessment. He has prepared hundreds of risk assessments and managed numerous large, complex site investigations and remediation projects, and has been active for many years in the development of federal and state rules, guidance, and policy regarding risk assessment. Dr. Rish was a pioneer in the development of probabilistic methods for evaluating uncertainty in estimating chemical and radiological human health risk from environmental impacts.

Dr. Rish has worked across the nation on sites subject to CERCLA, RCRA Corrective Action and Closure, and state orders and voluntary action. He also has worked on Department of Energy and Department of Defense projects. In addition, he has a strong background in systems failure and accident analysis, including chemical and nuclear systems. He provides consulting and workshops to regulators, attorneys, and industry on communicating environmental risk to the public.

Dr. Rish has experience with the Toxic Substances Control Act (TSCA), including Section 6 experience preparing existing high-priority chemical risk evaluations, conditions-of-use development, life-cycle exposure assessment, and hazard assessment. He also has TSCA Section 5 experience with Premanufacture Notification (PMN) submittals, new chemical safety assessment and prioritization, and obtaining CAS designations.

He is currently focused on scientific methods for assessing cumulative health risks at communities that may be vulnerable to disproportionate environmental impacts. Dr. Rish is chair of the Society of Environmental Toxicology and Chemistry (SETAC) Human Health Risk Assessment Interest Group, and has chaired sessions on methods for cumulative impact assessment at the past two SETAC annual North America conferences; this leadership will continue at the upcoming SETAC conference. Bill is also a member of the Society for Risk Analysis (SRA) Justice, Equity, and Risk Specialty Group.

Dr. Rish graduated from Carnegie-Mellon University with a doctorate in Engineering and Public Policy.

## EDUCATION AND DEGREES EARNED

---

- 1982 Carnegie-Mellon University, Doctorate in Engineering and Public Policy
- 1974 Carnegie-Mellon University, Bachelor of Science in Metallurgy/Materials Science and Public Affairs (jointly conferred)

## CERTIFICATIONS

---

- 1995–2012 Certified Professional, Ohio Environmental Protection Agency, Voluntary Action Program

## PROFESSIONAL HONORS/AWARDS

---

- 2000 Phoenix Award for best Brownfield project in USEPA Region 5, Catholic Charities Community Center

## PROFESSIONAL ASSOCIATIONS

---

- 2019–present Society of Environmental Toxicology and Chemistry
- 1980–present Society for Risk Analysis
- 2021–present Interstate Technology Regulatory Council

## SCIENTIFIC ADVISORY PANELS, COMMITTEES, & WORKGROUPS

---

- Present Member, Reuse of Solid Mining Waste Team, Interstate Technology Regulatory Council
- Present Chair, Human Health Risk Assessment Interest Group, Society of Environmental Toxicology and Chemistry
- 2020–2022 Steering Committee Member, Human Health Risk Assessment Interest Group, Society of Environmental Toxicology and Chemistry (Chair, Environmental Justice Subgroup)
- 2022–present Member, Justice Equity and Risk Specialty Group, Society for Risk Analysis
- 2019–2020 Alumni Advisory Council Chairman, Department of Engineering & Public Policy, Carnegie-Mellon University
- 2012–2017 Chair, Health Risk Subcommittee, Marcellus Shale Coalition
- 2015–2016 Member, Induced Seismicity Workgroup, States First Regulatory Initiative
- 2012–2019 Member, Ohio Chemistry Technology Council, Operational Excellence & Sustainability Committee
- 2006 and 2018 Member, Workgroup: Human Health and Ecological Risk Assessment Procedures, Ohio EPA Multidisciplinary Board, Five Year Rule Review
- 2001 and 2018 Member, Workgroup: Generic Numerical Standards, Ohio EPA Voluntary Action Program Multi-Disciplinary Board, Five Year Rule Review
- 1998–1999 Risk Assessment Guidance Committee, Ohio Bureau of Underground Storage Tank Regulation (BUSTR) Rulemaking, Rule 13—Corrective Action.

1995–1996	Member, Human Health Technical Advisory Committee, Regional Environmental Priorities Project, Northeast Ohio Region
1994–1995	Member, Scientific Committee 64 17, National Council on Radiation Protection and Measurements (NCRP), "Evaluating Uncertainty in Assessment of Dose in the Absence of Site Specific Data"
1994–1996	Co-Coordinator, Subcommittee to Develop Cleanup Standards and Site-Specific Risk Assessment Procedure Rules, Ohio EPA Voluntary Action Program Rulemaking
1989–1990	Co-chair, Exposure/Risk Assessment Working Group, Great Lakes Program, State University of New York at Buffalo

## PROJECT EXPERIENCE

### *Risk-Based Site Investigation and Remediation*

Over a 30-year period, Dr. Rish has been project and program manager for many large, complex environmental projects across the United States under RCRA, CERCLA, state voluntary programs, and state and federal orders.

Selected site investigation and remediation projects include:

- Currently directing a multi-year project involving third-party review of all human health and ecological risk assessments at numerous coal combustion residual storage areas under the United States Disposal of Coal Combustion Residuals from Electric Utilities rule.
- Prepared remediation and closure plans for an abandoned steel plant and gained acceptance for the plans under a mediated consent order. Plans included four RCRA Closure Plans, a Cessation of Regulated Operations Plan, a Hazardous Waste Management Plan, a Solid Waste and C&DD Management Plan, a Lagoons and Water Treatment Works Closure Plan, and four Interim Action Plans. Currently serving as overall site coordinator for implementation of all plans.
- Project manager for a groundwater remediation project involving vinyl chloride and 1,2-dichloroethane at an industrial facility in Hammond, Indiana. In situ chemical oxidation was used to reduce source-area concentrations, followed by use of a vapor mitigation system to manage indoor air levels.
- Directed the site investigations, human health and ecological risk assessments, and remedial feasibility studies at the Former Diamond Shamrock Site in Painesville, Ohio (also known as Lakeview Bluffs Brownfield Redevelopment). These risk assessments were done for more than 20 separate areas of concern under Director's Final Findings and Orders with the Ohio EPA. The site comprises 1100+ acres, abutting Lake Erie on its northern border and with the Grand River flowing across the site. Studies and remediation plans were coordinated with extensive plans to redevelop various portions of the site.
- Assisted with development of the remediation work plan (RWP) for the site of a pipeline leak of petroleum condensate in Colorado. Condensate leaked over months in mountainous terrain, entered a ravine, and traveled through groundwater to a discharge point in a spring. Remediation includes well skimmers, chemical injection in the spill area, and a collection system at the spring.
- Acted in key role as the Certified Professional (under the Ohio Voluntary Action Program) on many large and high-profile Brownfield projects. Secured 14 No-Further-Action (NFA) Letters and 14 Covenants Not to Sue, as well as 10 Urban Setting Designations (USDs), under the Ohio Voluntary Action Program (VAP). Wrote Chapter 25, Practical Aspects of Risk Assessment for Brownfield Development, in the American Bar Association's Brownfields book. Project for the Catholic Charities won a Phoenix Award for best Brownfield project in USEPA Region 5.

### ***Risk Assessment, Risk Communication, and Risk-Based Policy Development***

Dr. Rish is a published expert in risk assessment and uncertainty analysis. He has been active for many years on numerous advisory committees and workgroups in the development of federal and state regulatory rules, guidance, and cleanup standards. He has directed human health and ecological risk assessments, including risk-based cleanup standards and strategies, at many complex and high-profile sites, both chemical and radiological. He also prepares exposure and risk assessments for articles and products in commerce—for example, PFAS in containers and radium in brine deicing agents. In addition, he has a strong background in systems failure and accident analysis, including chemical and nuclear systems. He provides consulting and workshops to regulators, attorneys, and industry on communicating environmental risk to the public.

Selected risk assessment, communication, and policy projects include:

- Dr. Rish led a team assessing the lifecycle radiological risks associated with beneficial use in cement of alumina processing residue. The work resulted in a publication: Marschke S, **Rish W**, Mauro J. 2019. Radiation exposures from the beneficial use of alumina production residue. J AWWA online, <https://doi.org/10.1080/10962247.2019.1670281>.
- Over the past 3 years, Dr. Rish continues to work in support of proposed Ohio legislation regarding oil and gas brine use for deicing. He worked with the Ohio Department of Natural Resources to prepare sampling plans to (1) demonstrate that the brine treatment process does not enhance the radioactivity levels in the deicing product, and (2) establish a data set to represent radium concentrations in the brine from different well sources. Assuming several worst-case public exposure scenarios, Dr. Rish and his team used the data as input to the RESRAD dose assessment model to predict doses from product use. The modeling was used to develop proposed radium concentration screening criteria to be included in the legislation.
- Current Principal Investigator of a one-year research project evaluating the quality of frameworks, data, indices, and analytical methods for Environmental Justice impact assessments.
- Worked on a team to prepare an external party TSCA Risk Evaluation for one of the first 10 high-priority existing chemical substances under the Lautenberg Amendment.
- Recently directed an air toxics risk assessment for a metal calciner, including stack emissions, fugitive dust emissions, and multiple residential exposure pathways.
- Assisted in preparing a probabilistic risk assessment of health risks associated with ingestion of fish and shellfish at the Newark Bay Study Area CERCLA site.
- Assisted in developing risk-based remediation levels for dioxins and furans for a former wood treating facility site undergoing residential redevelopment in Canada.
- Prepared a bounding policy assessment of drinking-water risks and well-pad worker risks from spills of wastewater (flowback) and fluid additives used in hydraulic fracturing of horizontal shale gas wells.
- Prepared a risk analysis of deep injection of hazardous waste for the American Chemical Council (ACC), which used probabilistic risk assessment (PRA) methods to analyze how underground injection technologies might fail to isolate waste from the environment. The study involved extensive workshops and interviews with industry and state and federal regulatory experts. Implications for regulatory requirements regarding chemical-industry injection practices were evaluated and presented to EPA. A section devoted to this study is contained in Chapter V of the EPA Office of Water report: Class I Underground Injection Control Program: Study of the Risks Associated with Class I Underground Injection Wells (March 2001).
- Prepared a study of the social risks of deep injection of hazardous waste for a large international chemical handling company. The study examined public perception, acceptance, and organized resistance related to Class I hazardous waste injection wells. Identified and discussed key factors to consider when deciding whether to commercialize a Class I well. The audience was a non-U.S. corporate board of directors.

- Co-Coordinator of the Ohio EPA committee that developed the Voluntary Action Program Generic Numerical Standards (Rule 3745-300-08) and Property-Specific Risk Assessment Procedures (Rule 3745-300-09). The committee was interdisciplinary, and included representatives of government, industry, real estate development, and public advocacy groups. Presented aspects of the rules—for example, the Urban Setting Designations for groundwater—at numerous public meetings.
- Presented training sessions in Risk Communication to: Texas Commission on Environmental Quality (TCEQ), Ground Water Protection Council (GWPC), Marcellus Shale Coalition (MSC), and Ohio State Bar Association (OSBA) in 2017. Presented risk-based engineering class to Ohio Society of Professional Engineers (OSPE).
- Managed a historical dose reconstruction project at Idaho National Engineering Laboratory (INEL) for the Centers for Disease Control and Prevention (CDC). The project identified, retrieved, and evaluated all documents, data, and personal accounts pertinent to the reconstruction of potential doses and risks to the population near INEL over its 40 years of operation. Included management of an extensive public outreach program.

## ***Uncertainty and Liability Analysis***

Dr. Rish is a pioneer in the development and use of probabilistic methods to evaluate uncertainty and environmental liability, and to establish environmental standards. He initially developed his skills in this area while at Carnegie-Mellon University and Brookhaven National Laboratory as a graduate student. Dr. Rish's doctoral thesis was on Characterizing Uncertainty in Estimating Impacts from Energy Systems. He also helped prepare the documents, Technological Uncertainty in Policy Analysis (Brookhaven National Laboratory, 1982), and Uncertainty: A Guide to Dealing with Uncertainty in Quantitative Risk and Policy Analysis (Morgan and Henrion, 1990), and was co-author of Technical Uncertainty in Quantitative Policy Analysis: A Sulfur Air Pollution Example (Morgan et al., 1984).

Selected relevant uncertainty and liability analyses:

- Regularly assists corporations in analyzing environmental liabilities in support of strategic business decision making, including SEC reporting, acquisitions and divestments, insurance settlements, and setting reserves and accruals. This work includes evaluating remediation strategies, understanding regulatory obligations, and estimating future remediation costs and timelines.
- As an expert witness, developed the basis for determining settlement amounts in negotiations and litigation between environmental insurers and the insured, for large portfolios of assets.
- Assisted with preparation of the analysis of uncertainties in the US EPA pathways and health effects modeling used as the basis for standard 40 CFR 191 for high-level radioactive waste and reported the results to the Science Advisory Board (SAB). Was a technical reviewer for EPA for their study of radiological risks from naturally occurring radioactive materials (NORM) from produced water at offshore oil rigs. Also developed a program-wide guidance manual for the EPA Office of Radiation Programs staff on uncertainty in risk analysis and risk management (see publications below).
- Prepared a probabilistic risk evaluation of using six different coal-mine sites for ash disposal.

## ABSTRACTS AND PRESENTATIONS

---

Dr. Rish has presented extensively on a wide range of topics related to risk assessment, uncertainty analysis, risk communication, and liability analysis. He is regularly an invited speaker. Some recent presentations include:

- **Rish W**, Marschke S, Racz L, Mauro J. Radiation exposures from the beneficial use of alumina production residue (red mud). Poster presented at Society of Environmental Toxicology and Chemistry North America 44<sup>th</sup> Annual Meeting, Louisville, KY, November 2023.
- **Rish W**. Cumulative Impact Assessment in US EPA's Environmental Justice Initiative. ACC GlobalChem 2023. April 3-5, 2023. Washington, DC.

- East A, **Rish W**, Klaren WD. Using NHANES data to characterize the magnitude of allostatic load in vulnerable communities: Impact to existing risk assessment uncertainty/variability factors. Poster presented at Society of Toxicology Annual Meeting, Nashville, TN, March 2023.
- **Rish W** and Verweil A. Instructor at the Society for Risk Analysis 2022 Annual Meeting workshop—*Approaches to Assessing Environmental Justice: Perspectives from the Scientific, Regulatory and Regulated Communities*. Tampa, FL December 2022.
- Perry C, **Rish W**, Ring C, Mittal L, Harris M. Use of probabilistic risk assessment and physiologically based pharmacokinetic modeling in supporting soil remedial objectives for dioxins and furans at a Canadian site. Poster for Society for Risk Analysis, Virtual Annual Meeting, 2020.
- Ring CL, **Rish WR**, Brorby GL. Prioritization of eight PFAS by population exposure and reference-dose uncertainty. Poster session at SETAC North America Focused Topic Meeting “Environmental Risk Assessment of PFAS”, 12-15 August 2019, Durham, NC.
- Amended TSCA impacts on OSHA: Product stewardship implications. Presented at Product Stewardship 2018 Conference, Washington, DC, September 2018.
- Bounding analysis of drinking water health risks from a spill of hydraulic fracturing flowback water. Presented at the Marcellus Shale Coalition Member Meeting, Pittsburgh, PA, January 31, 2017.
- New technology for measuring real-time mass emission rates of methane and VOCs from oil and gas facilities. Presented at Innovative Environmental Monitoring Technology Symposium 2016, Ohio University, October 18, 2016.
- Adaptive management of remediation. Detroit Remediation Conference, Detroit, Michigan, September 2016.
- Addressing the challenges of environmental risk communication. Presented at the Ohio State Bar Association Annual Environmental Conference, April 2016.
- Prioritization, risk evaluation, and safety determinations under the Frank Lautenberg Chemical Safety Act for the 21<sup>st</sup> Century. Presented at Ohio Chemistry Technology Council Meeting, June 11, 2015.
- Understanding induced seismicity risk from hydraulic fracturing. Presented at Ohio Oil and Gas Association Winter Meeting, March 2015.
- Health risks from drinking water impacted by a flowback water spill in the Marcellus Shale region. Presented at the Ground Water Protection Council Annual UIC Conference, Austin, Texas, February 2015.
- Everything old is new again: 110 years of assessing risks of underground injection of waste. Ground Water Protection Council UIC Annual Conference, Austin, Texas, February 2015.
- Katona MA, Long TF, Kirman CR, Gargas ML, **Rish WR**. 2000. Derivation of a cancer potency factor and dermal absorption factor for benzo(a)pyrene. *Toxicologist* 54, abstract 873. Presented at the 39th Annual Meeting of the Society of Toxicology, Philadelphia, PA.
- **Rish W**, Kirman CR, Hays SM, Gargas ML, Andersen ME, Reitz RH, Guengerich FP, Green T, McConnell EE, Buckpit A, Voytek P, Dugard PH. 1999. Developing a physiologically based pharmacokinetic model to describe methylene chloride kinetics at the subcellular level. *Toxicologist* 48, Paper No. 671. Presented at the 38th Annual Meeting of the Society of Toxicology, New Orleans, LA.
