PROFESSIONAL PROFILE

Dr. Amanda Buerger is a Senior Scientist I in ToxStrategies' Health Sciences Practice. Her primary areas of experience include human health risk assessment and toxicology. She has provided support to a range of clients, including pharmaceutical companies, chemical manufacturers, universities, and producers of consumer products. She studies the health effects related to exposure to a wide range of chemicals including environmental contaminants like pesticides, industrial chemicals such as asbestos and talc, and ingredients used in consumer products like flavorants. In risk assessment, Dr. Buerger applies weight of evidence (WoE) approaches incorporating clinical, nonclinical, *in vivo*, *in vitro*, and *in silico* data. She utilizes new approach methodologies (NAMs) in her projects including applications such as the Organisation for Economic Coordination and Development Quantitative Structure Activity Relationship (QSAR) Toolbox and the U.S. Environmental Protection Agency Generalized Read-Across (GenRA) application. She is experienced in conducting statistical analyses using R (RStudio) and benchmark dose modeling.

Dr. Buerger has produced and contributed to a variety of products for clients including occupational exposure limit (OEL), occupational exposure banding (OEB), permissible daily exposure (PDE), and allowable daily exposure (ADE) derivation documents; U.S. Food and Drug Administration (FDA) submissions; and inhalation risk assessment courses. Dr. Buerger also has experience in providing litigation support related to pesticides, chlorine, asbestos, talc, and food flavorings.

EDUCATION AND DEGREES EARNED

- 2019 Doctor of Philosophy (Ph.D.), Environmental and Global Health
University of Florida
- 2015 Bachelor of Science (B.S.), Environmental Health (major), Sustainability (minor)
University of Notre Dame

HONORS/AWARDS

- 2020 Outstanding Student Research Award, University of Florida, Department of Environmental and Global Health
- 2019 Outstanding Student in Public Health Service Award, University of Florida, Department of Environmental and Global Health
- 2019 Best Paper, Environmental Toxicology and Chemistry journal
- 2018 Paper of the Year, Environmental Toxicology and Chemistry journal

PROFESSIONAL ASSOCIATIONS

- 2016–Present Society of Toxicology
- 2015-2021 Society of Environmental Toxicology and Chemistry (SETAC)
- 2019-2020 Membership Committee (SETAC)
- 2017-2019 North American Student Advisory Council, Member (SETAC)
- 2017-2018 North America Student Advisory Council, Southeast Chapter, Representative (SETAC)

INVITED LECTURES

- Buerger, AN. "Emerging contaminants and endocrine disrupting compounds." Environmental Concepts in Public Health, Department of Environmental and Global Health, University of Florida.
- Buerger, AN. "Metabolic consequences of DEHP exposure in zebrafish: Convergence of host and microbial mechanisms." Environmental and Global Health Seminar, University of Florida, October 3, 2018.
- Buerger, AN. "Probing phthalate-induced transcriptional changes related to obesity in zebrafish." Environmental and Global Health Seminar, University of Florida, September 20, 2016.

SELECTED PROFESSIONAL EXPERIENCE

NAMs and Computational Toxicology

Applied approaches like read-across and chemical grouping in risk assessment and exposure limit derivation for categories of flavorants, taking into account aspects of toxicokinetics and toxicodynamics from various lines of

evidence. Employed predictive toxicology approaches and tools, including QSAR modeling, to inform the toxicology of various substances in numerous inhalation risk assessments. Applied dosimetric tools in inhalation risk assessment to inform human equivalent concentration derivation. Created, managed, analyzed, and maintained quality control of large datasets in Excel and R software, including the calculation of hazard quotients and cancer risks.

Exposure Limit Derivation

Managed and contributed to a variety of occupational toxicology and risk assessment projects, and critically reviewed proposed and existing regulatory exposure limits for numerous chemicals. Contributed to the development of hazard banding frameworks for biocatalytic and medicinal enzymes based on sensitization potential, informed by data from clinical, *in vivo*, *in vitro*, and *in silico* streams of evidence. Generated standard operating procedures for derivation of OELs and assignment of OEBs.

Exposure and Risk Assessments

Supported clients in various sectors including pharmaceuticals, foods and flavorings, and biosolids, and worked on projects related to various acute respiratory irritants. Conducted risk assessments for a range of populations including consumers and workers. Assisted with the development and execution of inhalation risk assessment courses for a variety of clients. Created reports regarding the effects of acute exposures on chronic health outcomes, including aspects related to odor detection, respiratory irritation, and sensory irritation.
