## PROFESSIONAL PROFILE

---

Ms. Lauren Bylsma is an epidemiologist with broad experience in conducting research in pharmacoepidemiology; nutritional, cancer, environmental, and occupational epidemiology; and the epidemiology of rare diseases. With a Master of Public Health degree and Certificate in Global Health, Ms. Bylsma conducts systematic reviews and meta-analyses of scientific literature on human health issues ranging from osteoarthritis to vascular disease to various forms of cancer. She has worked as a research assistant on a prospective cohort study evaluating the effects of air pollution on pre-term birth in Mexico City and interned at the Universidad Nacional Autónoma de México in Mexico City managing nutritional data and analyzing fetal growth effects of maternal dietary patterns.

Ms. Bylsma taught an integrative capstone seminar in the Department of Public Health at Calvin College and has presented work at conferences across research settings, including the American Society of Hematology, European Society for Medical Oncology, Experimental Biology, and International Society for Pharmacoeconomics and Outcomes Research.

## EDUCATION AND DEGREES EARNED

---

- 2013 Master of Public Health, Epidemiology; Certificate in Global Health  
University of Michigan School of Public Health, Ann Arbor
- 2011 Bachelor of Science, Biology  
Calvin College, Grand Rapids, Michigan

---

## PROFESSIONAL HONORS/AWARDS

---

2011–2013 Dean's Award, School of Public Health, University of Michigan

---

## PROFESSIONAL ASSOCIATIONS

---

2017–Present International Society for Pharmacoepidemiology

---

## SELECTED PROFESSIONAL EXPERIENCE

---

Managed systematic literature reviews for topics including osteoarthritis, vascular access efficacy and safety outcomes, second-line treatments of non-small-cell lung cancer, mutation prevalence in metastatic colorectal cancer, use of thrombopoietin receptor agonists in chemotherapy-induced thrombocytopenia, and second-line therapies in immune thrombocytopenic purpura.

Estimated incidence and prevalence of various chronic conditions and cancers for epidemiology sections of regulatory submissions of orphan drug applications.

Used SEER and census-tract data to evaluate historical cancer incidence and mortality in a community near a former manufactured gas plant. Also used SEER data, along with scientific literature, to predict future numbers of U.S. patients with metastatic colorectal cancer that undergo surgical resections.

Performed a systematic literature review and conducted indirect treatment comparisons with relevant comparator drugs in lieu of head-to-head trials for pharmaceutical approval.

Assisted in a meta-analysis of the association between red and processed meats and multiple cancer sites for review by the International Agency for Research on Cancer.

As a research associate, performed extensive literature reviews, summarizing and critiquing available epidemiologic literature on environmental and occupational exposures, particularly air pollutants and pesticides, and their associations with various diseases and malignancies.

During graduate work, contributed to the Air Pollution and Birth Outcomes Study, a prospective cohort of approximately 1000 pregnant women in Mexico City, Mexico. Supervised data entry, cleaning, and management, and translated data collection forms into Spanish.

Also worked with the Air Pollution and Birth Outcomes Study as an intern in Mexico City. Created a database and bilingual data dictionary and designed and performed analysis on the Spanish-language Food Frequency Questionnaire used in the study.

Performed microbiological laboratory research on biofilm bacteria, particularly *Staphylococcus aureus*, and their ability to evade host-cell defense mechanisms. Conducted various experiments with bacterial growth assays, protein purification, and binding assays. Worked with standard biological research technology: flow cytometer, spectrophotometer, fluorescent spectrophotometer, SDS-PAGE, and agarose-gel electrophoresis.

At the Calvin College Department of Public Health, taught a semester-long course—"Integrative Seminar in Public Health"—for upper classmen in preparation for work in the field of public health. Course highlighted current topics and challenges in the five major areas of public health: biostatistics, epidemiology, health policy, health education, and environmental health.

## JOURNAL PEER REVIEWER

---

*Journal of Medical Economics*

*Kidney Medicine*

## BOOK CHAPTERS
